- 🕒 1700 Fireplace talk: From start-up to exit *By Michael Lentge Andersen. Moderator: Zaynab Al-Hussaini*
- 🕒 1800 The Cyber Market seen from a VC Point of View *By Jens Holzapfel*

Campfire Security

Cyber security training for IT Professionals

Campfire Security provides online cyber security training for young people and software/IT professionals

Do you want to excel in the field of hands-on cyber security? We can help you from getting started within cyber security, to becoming an IT security specialist! Our training is based on 5+ years of scientific research with proven results.

We offer company-wide upskilling and certifications for individuals, teams or departments. Our platform is based on realistic training in virtual hacker labs. You get to work with real vulnerabilities in safe environments, and will learn how to think like the hacker, so you are protected against hackers!

Cybercue

Tailored cyber security in 10 minutes

Many smaller businesses choose to defend themselves against cybercrime with their eyes closed or fingers crossed. Some underestimate the risk, while others buy solutions that are too large for their needs. But many simply give up in advance – because the classic cyber security solutions are often too expensive, too complicated or too time-consuming.

Cybercue is a smarter, lighter and cheaper alternative that delivers tailored cyber security for SMEs – all in one simple app. The SME's IT key person or manager starts by answering 12 simple questions about the company. 10 minutes later, the SME is underway.

Building trust with your customers

Building trust with your customers.

The friendliest cybersecurity cockpit: Cyberjuice helps start-ups and SMEs get to the right level of security on their own. Spend less time on documents and more time on work that matters. Get the right kind of support from our community and experts - everything at a friendly price.

Our mission is to grow a community of friendly organisations where even boring work feels good.

We value honesty, care and playfulness.

livsduelighed

**Nuanced knowledge of technology and people
– and how these two dimensions fit in a
healthy way**

CyberSundhed is a weekly podcast that delves into the interplay between humanity and technology. It aims to spark new conversations about their relationship and the necessity for dialogue in an era where AI technologies like ChatGPT are poised to reshape society and human behavior. The podcast seeks to uncover answers to questions such as “what defines a good human?” and the role of technology in shaping our ethics.

By fostering a culture of curiosity and learning, CyberSundhed encourages its audience to contribute to a happier world.

PII Guard

The Future of Privacy Protection

Depersonalize your data and get perfect data for test, cloud, data warehouse, analytics, AI training, research etc., without exposing personal information or compromising GDPR.

PII Guard has developed the next generation of encryption with the strongest algorithm for privacy in the world. It's called Type-Preserving Encryption (TPE). With this technology, PII Guard can help set your data free so you can use data for more purposes with fewer restrictions and less risk. With TPE data will maintain its value and act as original data.

PII Guard is a Danish company founded by security experts. Our unique products help leading public and private organizations protect privacy in an easy, automated way.

SAGA LABS

SECULYZE

Software for optimizing Microsoft Sentinel

Decreasing the risk of cyberattacks

Seculyze is B2B SaaS that decreases the risk of cyberattacks by 80% by removing irrelevant cyber alerts and prioritizing the remainder, which both reduces the required working time and provides better security.

Our solution collects alerts from all Microsoft's security products in one portal with three overall features:

- Health check to ensure continuous best practice setup of your SIEM and EDR
- Tune out false positive alerts with ML/AI to remove tedious work – and correlate past true positive alerts
- Enrich alerts with additional data to prioritize the scarce resources and decrease handling time with better decisions
